It's 11pm.

Exam tomorrow at 9am.

12 weeks of lectures you barely remember.

Every student in this room has lived this moment.

We built the solution.

CC CAL DOC ♪

The Problem

Students manage 3 disconnected platforms every single day.

- Moodle
- TUMonline
- Library Portal

None of them talk to each other.

One Message. Everything Done.

You

"I have my Machine Learning exam tomorrow"

→ 60 seconds later, everything is ready.

01	02	03	04	05
Reads every lecture	Generates study guide	Predicts the exam	Books study room at 7am	Reads briefing out loud

You just study.

3 Autonomous Agents

One conversation. Three specialists. Everything handled.

01 Moodle Agent

Logs into Moodle. Downloads every lecture. Generates a complete study guide with theorems, analogies, formulas, and 3 levels of exercises.

Predicts your exam from past exam patterns.

02 Room Agent

Navigates the TUM library portal. Finds available study rooms near your faculty. Books the best one for tomorrow morning automatically.

No forms. No searching. Just a confirmed booking.

03 Voice Agent

Reads your morning briefing out loud. Summarizes what to focus on, where your room is, and what the exam will likely cover.

Powered by ElevenLabs natural voice synthesis.

What Makes Us Different

We don't just summarize. We teach. We predict. We act.

Predicted Exam

Analyzes real past exams from your professor. Generates a predicted exam in the exact same format same question types, same difficulty, same weighting.

It Actually Teaches

Every theorem has an analogy. Every formula has a numerical example. Exercises at 3 difficulty levels because memorizing is not understanding.

Cross-Course Intelligence

Ask how Neural Networks are explained across two courses. The agent compares them and builds a unified mental model for you.

Campus Copilot

The night before your exam used to be your worst nightmare.

We made it your secret weapon.
